

# FACSLIDE<sup>+</sup>

## Tracks fitting to the mast without modification

The tracks are easily fixed with slugs alongside the existing mast without unstepping

## Top and bottom stoppers (EB15, ER40)

Delivered in the FACSLIDE<sup>®</sup> kit, these stoppers prevent the cars from sliding out of the tracks.

EB15 (F10,20,30)

ER40 (F40)

## Headboard cars (FT10, FT20, FT30, FT40)

can be fitted on the head board of the existing sail or simply on a ring

+ than 180°

toggle with large articulation

Safety-clip device (similar to the FX Gennaker furlers)

## Monoblock cars

The FACSLIDE<sup>®</sup> cars are CNC machined in one block of aluminium, this makes them shock-proof when lowering the sail.

## Automatic reefing

- Reefing the mainsail is easy as the effort for tightening the halyard are limited.
  - As a complementary boom option Facnor supplies the F40 outhaul foot car.
- (ref. 540 204 008 20)
