

## A new model for the electric Code Sail furler : Up to 250M<sup>2</sup>!

Further to the successful developments made for the electric furlers, the Wichard Group teams have adapted the multi-motor concept to Code Sails up to 140 m<sup>2</sup>... and now 250 M<sup>2</sup> !

The result is a concentration of energy in a compact, light and particularly efficient furler.

> **Simple installation:** the electric furler is delivered with a complete kit (relay box, circuit breaker, wire, deck plug, storage bag, protective cover) and benefits from a dedicated, simple and waterproof electrical connection.

> **Easy to set up:** thanks to a snap shackle at the bottom, a fast tack attachment as well as a protection cover with handle

> **Compact and light:** the size is reduced to allow an easy switch from manual to electric system, but also to save weight and make the operation handy.

> **Fast and comfortable to use:** 45 seconds (FXE 4500 or Nexelite 4.5) for furling a 140 m<sup>2</sup> Code sail (85 rpm\* for the 12V version) just by pressing a button! Handled from the cockpit in complete safety.

(\* -20% rpm / under load)

> **Power consumption:** 30-35 Ah under load (with a FXE 4500 or Nexelite 4.0) .

> **Widely tested :** numerous mechanical and electrical endurance tests in workshop and in real-life conditions. For Code Zero up to 250 M<sup>2</sup>

> **Options:** wired or wireless controller version.

> **Available in 12 or 24 Volts**

> **Compatible :** with our Flying sails accessories : Asymmetrical Spinnaker, Snatch Blocks,....

**New model first worldwide presentation at the Cannes Yachting Festival ! ( Stand Sail#132)**
